VPN Remote Access Request Form

Information Systems Department

A **virtual private network (VPN)** extends a [private network](#) across a public network, and enables users to send and receive data across shared or public networks as if their computing devices were directly connected to the private network. Applications running across the VPN may therefore benefit from the functionality, security, and management of the private network.

Charles R. Drew University of Medicine and Science can provide access to our VPN software per user basis. This software can only be installed on CDU managed laptops for security purposes.

Please fill out required information below for each person needing VPN Access and return to helpdesk@cdrewu.edu
